

Winshuttle, FM v20.2.8

Server-Side Installation - (Importing transports to Winshuttle Function Module)

Version 1.0

March, 2022

Winshuttle SAP Add-On Component Installation/Upgrade Document

Pre-requisite:

Please ensure that you have completed steps of document

“1Server Side Installation & Upgrade Instructions - WFM v20.2.8”

Procedure

The transport import is a standard procedure and will come as two files (K900nnn.XXX and R900nnn.XXX) ; where nnn will be a SAP generated number and 'XXX' will be respective SAP system ID (SID) for relevant server.

1. Goto DIR_TRANS path (e.g. /usr/sap/trans on Windows NT) (e.g. \usr\sap\trans on unix) and copy the files into the subdirectories “cofiles” and “data” as shown below:

The K_ file is to be copied into “cofiles” directory and R_ file is to be copied into the “data” directory
2. Logon into SAPGUI and start transaction **STMS** and select the import queue for the target system
3. Go to menu option **Others>Extras> Other Requests> Add**, enter request XXXK900nnn
4. Select the request number XXXK900nnn
5. Go to Menu option **Request > Import**, to Import the XXXK900nnn into the system.
6. In case your target client is not 000, then ensure to select the Option “Ignore Non-Permitted Table Class”.
7. For Basis release higher than 700, ensure to select the option ‘Ignore Invalid Component Version’
